3D Relief Models- II

Product Image

Description

Geographical/Geological Plastic Relief Models : Made of rigid PVC sheet with a markable & washable surface. Size of each Model 100 x 75 cms supplied with hard backing aluminium frame & hanging hooks

Desert Features & Eolian System : Shows why the day temperature in deserts are very high & night temperatures very low.

Cycle Of Erosion : Shows how the cycle of Erosion works, how rivers move sediment down streams, widening the valleys and

Deformation Of The Earth (Folds & Faults) : Shows the process of the deformation of

the earth and how folds are in size from microscopic structures to large domes and basins and how the faults are the ones which are formed by displacement in the earth.

Drainage Pattern : Shows the topographical, morphological, nature of rocks and the slope pattern which determine the drainage pattern in nature.

Shoreline System(Sea Waves) : Shows the coastal land form which are made by various marine forces and how the action of waves make different coastal landscapes.

Glacial System : Shows how the Ice flows under the pull of gravity and how the snow is transformed into ice. How meltwater can rework much of the glacial sediments and redeposit it down streams.

Mass Movement On Earth : Shows how mass movement of erosion of land, under all Geological conditions of the earth, may be slopes of high mountains, or plains or under the oceans takes place.

Features Of The Dry Desert : This model shows how bescouring winds work on the land surface of the deserts, sand- blasting rocky outcrops into bizarre shapes and blowing sand dunes inever changing patterns.

The Earth Interior : Showing mineral resources is a volume of the Earth crust in which an abnormally high concentration of a specific mineral or ful occurs

Story Of The Earth :Shows the earth Geological history from the very beginning till today. A time chart of the Earth geological events.

Weathering Model : Shows how climate precipitation and temp. along with mechanical and chemical process decomposes both rocks and soil. Shows how the weathering process works.

Ground Water : Shows how the water moves in the pore spaces of the rocks beneath the earth surface. Shows that ground water is a part of Hydro logic system and natural. It occurs not only in humid areas but also beneath desert regions.
