Bernoulli Tube Apparatus

Product Image

Description

To explain Bernoulli theorem by observing the variation in the pressure and speed of flow of an incompressible fluid through a tube with respect to the tube bore or cross-section.

Consist of a Bernoulli tube, with central narrowed portion, a constant bore gradient tube, 6 lengths glass tubing, 2 swan necked outlets tubes and 8 small pieces of rubber connecting tubing for joining various glass tubings as and when needed. The two flow tubes, each 500 x 13mm (L x OD) have three sealed-in short side tubes of length 25mm each with interspacing of about 150mm for connection to glass tubing lengths for use as manometers. To study the effect of constriction, the middle short side tube in Bernoulli tube come out from the central narrowed portion.

Custom made configuration is available for developing countries or Ministry of Education Tenders
