Colloid Mill

Product Image

Description

A colloid mill is a piece of machinery that is used to reduce the particle size of a solid suspended in a liquid or the droplet size of a liquid suspended in another liquid. The machine comprises an intake that is subjected to a massive shearing action that results in a

uniformly sized temporal dispersion and an exit.

This is accomplished by providing high degrees of hydraulic shear to the process liquid. Colloid mills are employed in the processes of a liquid dispersion, homogenization, emulsification, creams, mixing, and ointments, among other things.
