DNA Structure Model, Plastic Assembly Kit

Product Image

Description

An easy-to-assemble DNA model, this stunning recreation consists of specially shaped, brilliantly-colored plastic pieces. Each base in the 12 base pair model is a subtly different shape, and the sugars are made from a slightly difference plastic so the model flexes correctly to create a realistic double helix. We can deconstruct the double helix into two seperate strands by moving the central supporting spine and pulling the helix apart along the hydrogen bonds. Size(cm) : 12x12x40
