Digital Rotary Microtome

Product Image

Description

It is a modern and reliable sectioning equipment designed for very precise sectioning of tissues upto 1 micron thickness. The feed indicator, located in front of microtome is operated by the latest CAM DRIVE SYSTEM for accurate feed setting from 1-50 microns in steps of one micron. It is graduated in microns, is conveniently located in the front for instant references and its setting is controlled by a knurled knob at the back of the microtomes. The interior mechanism rests on a heavy cast iron base and is covered with a full swing protective cover for easier cleaning and lubrication. The Salient features include independent feed mechanism with automatic safety device, universal knife holder with lateral movements permitting use of the entire knife edge, universal vice type object holder for accurate centring of the specimen.
