Double Cone Blender

Product Image

Description

This machine is designed primarily for mixing or lubricating dry, freely flowing powders or grains. The machine is divided into three parts- the primary mixing bowl, the stand or

support structure, and the drive. On each side, two pillow block ball bearings support the vessel on the stand. The drive, which includes the engine, gearbox, and other components, is likewise positioned on the stand.

These blenders are widely preferred in a variety of industrial blending applications for their ease of use, cleaning, discharge, and lack of contamination. It has a slant double cone design and is made using high-quality components and innovative procedures to provide outstanding dead spot eradication.

High Quality product for use in Pharmaceutical Industry and Laboratory. Following is made in compliance with International Quality Standards and are manufactured using high-grade components and materials.
