Strip Packing Machine

Product Image

Description

Strip pack machines are frequently used in pharmacies for pills and tablets, for food such as chocolates, effervescent tablets, Altapharma and other units, dose packings such as throat lozenge, honey lozenge, and for consumer items such as mosquito-repellent incense mat and

electric mosquito mat.

The strips pack meets the moisture-proof and light-proof packaging requirements by employing Alu/Alu or plastic/plastic film material. Strip packing machines are designed to handle a wide variety of goods with exceptional precision and at rates of up to 2400 units per minute. The products exit the hopper and are routed through a stainless steel feeding system to sealing roller chambers, where laminated foils are taken from two rollers packs and seal the products in a continuous strip. The strip is then routed through vertical and horizontal cutter assembly to produce the necessary strip package sizes. Strip Packing Machine Appropriate for Strip combines a diverse selection of products into a single, readily dispensable strip while maintaining economy and efficiency.

High Quality product for use in Pharmaceutical Industry and Laboratory. Following is made in compliance with International Quality Standards and are manufactured using high-grade components and materials.
