White/Ultra Violet Transilluminator (Dual Model)

Product Image

Description

This is a conjunct mechanism of ultra violet & white light sources. Ultra violet section can be used to examine slab gel electrophoresis, Thin Layer Chromatography, D.N.A & Nucleic Acids. White light section can be used for viewing coomassie blue stained gels, silver stained proteins gels, autoradiographs & Microtiter plates. Construction : External case is made of thick steel & covered with a thick layer of epoxy based polyester paint which provides a strong, highly scratch & chemical resistant surface. This mechanism has two windows, one covered with U.V. transparent sheet & the other is covered with white translucent sheet, six 360nm U.V. sources & four white light sources are fixed beneath the windows. An exhaust fan is fixed for cooling, the hinged eye protective U.V. obstruction cover is provided for U.V. source. it covers both the windows.
